

S1 Careers Planning – “Discover E Engineers Workshop”

It was our pleasure to have representatives of the Scheme of Learning through Engineering, Art and Design (LEAD) and IBM Limited to help organize the “Discover E Engineers Workshop” for our S1 students on 19th May, 2017. The workshop aims to enrich students’ experience of learning and careers planning.

During the workshop, representatives of LEAD first introduced some basic knowledge about engineering such as what engineering is and the personal qualities needed for an engineer. Then, representatives of IBM and LEAD guided students to make and refine their own parachute and explained the theories behind it. After that, an exciting and fun-filled Inter-class Parachuting Competition was held and students enjoyed it very much.

Through participating in the workshop and having hands-on experience, S1 students could get a taste of what it is like to be an engineer. The workshop definitely helped them turn over a new leaf of careers planning.
